Art Unit: 1714

The amendment received December 19, 2003 has been made of record. Claims 1-7 are pending.

The rejection under 35 USC 102 contained in the previous office action is withdrawn in view of applicants arguments.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hartmann et al in view of Gonzalez-Oliver, Kayanoki, Kirtley and Mizoguchi et al.

Hartmann et al teach processes for the production of silanized silica and its use in coating compositions as discussed in the previous office action. This reference fails to explicitly recite the use of methacryloxypropylsilyl or glycidyloxypropylsilyl species for surface modification of the silica.

Each of the secondary references teaches beneficial coupling between silica and binder or matrix polymer arising from the use of applicants claimed silyl species with the Kayanoki reference explicitly teaching applications to coating compositions.

It would have been obvious, therefore, to follow the teachings of the secondary references and utilize the instantly claimed silyl species as coupling agent in the coating compositions of the primary reference with the reasonable expectation that desirable properties would ensue.
